B

I am a Balıkesir University Computer Engineering graduate who aims to learn and use new technologies such as AI, do web design, develop mobile application and improve myself in the field of software. I want to direct my career in the field of software development. I developed various projects by taking courses in technologies such as JavaScript, Python, HTML/CSS, AI, C#, SQL, PHP. You can access the projects I work on via my GitHub link.

Projects

Ne Alsan Website

I completed Ne Alsan website which I started development in my internship company.

Ne Alsan is a shopping website where customer can purchase any item is being sold on website.

On the other hand, admin can add new items to be sold, can edit/delete items, can see order details.

- Designing user interface for website by using React Native
- Creating database tables by using mysql
- Creating backend API by using express.js
- Creating connection between backend and database
- Designing Admin Panel by using React Native

Currency Estimation Tool

- Pulling data set for currencies from Kaggle from history

- Estimating the currency for a certain date range in the future by using data set by using Python and AI

Program To Spread Virus

- Program spreads virus on computer if enough score which was defined in program was not catch so mouse/keyboard actions can not be done
- Game and program both was written in Python

AI Game

- Game was designed in a way camera can understand the distance of hand location by using AI. User collects points based on distance between hand and ball in the game
- Game was written in Python

Skills

• Python	●●●●●●
• JavaScript	●●●●●●
• HTML/CSS	●●●●●●
• SQL	●●●●●●
• React Native	●●●●●●
• C#	●●●●●●
• AI	●●●●●●
• Java	●●●●●●
